

Recombinant Human TSG101, His-tagged

Cat. No. TSG101-30749TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant fragment of Human TSG101 fused to a 36 amino acid His-Tag at N-terminus, 20.7kDa.
Species	Human
Source	E.coli
ProteinLength	1-145 a.a.
Description	The protein encoded by this gene belongs to a group of apparently inactive homologs of ubiquitin-conjugating enzymes. The gene product contains a coiled-coil domain that interacts with stathmin, a cytosolic phosphoprotein implicated in tumorigenesis. The protein may play a role in cell growth and differentiation and act as a negative growth regulator. In vitro steady-state expression of this tumor susceptibility gene appears to be important for maintenance of genomic stability and cell cycle regulation. Mutations and alternative splicing in this gene occur in high frequency in breast cancer and suggest that defects occur during breast cancer tumorigenesis and/or progression.
Conjugation	HIS
Molecular Weight	20.700kDa inclusive of tags
Tissue specificity	Heart, brain, placenta, lung, liver, skeletal, kidney and pancreas.
