

Recombinant Human UBE2E3

Cat. No. UBE2E3-31658TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length Human UBE2E3 expressed in <i>Saccharomyces cerevisiae</i> ; 207 amino acids, MWt 22.9 kDa. Protein is tagged with 25 kDa proprietary tag.
Species	Human
Description	The modification of proteins with ubiquitin is an important cellular mechanism for targeting abnormal or short-lived proteins for degradation. Ubiquitination involves at least three classes of enzymes: ubiquitin-activating enzymes, or E1s, ubiquitin-conjugating enzymes, or E2s, and ubiquitin-protein ligases, or E3s. This gene encodes a member of the E2 ubiquitin-conjugating enzyme family. The encoded protein shares 100% sequence identity with the mouse and rat counterparts, which indicates that this enzyme is highly conserved in eukaryotes. Two alternatively spliced transcript variants encoding the same protein have been found for this gene.
Tissue specificity	Ubiquitously expressed at low levels. Highly expressed in skeletal muscle.
