

Recombinant Human UGP2

Cat. No. UGP2-31662TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length human UGP2 produced in <i>Saccharomyces cerevisiae</i> . Protein is tagged with 26 kDa proprietary tag.
Species	Human
Description	The enzyme encoded by this gene is an important intermediary in mammalian carbohydrate interconversions. It transfers a glucose moiety from glucose-1-phosphate to MgUTP and forms UDP-glucose and MgPPi. In liver and muscle tissue, UDP-glucose is a direct precursor of glycogen; in lactating mammary gland it is converted to UDP-galactose which is then converted to lactose. The eukaryotic enzyme has no significant sequence similarity to the prokaryotic enzyme. Two transcript variants encoding different isoforms have been found for this gene.
