

Recombinant Human SUCLA2 Protein, MYC/DDK-tagged

Cat. No. SUCLA2-3042H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human SUCLA2 fused with MYC/DDK tag at C-terminal was expressed in HEK293.
Species	Human
Source	HEK293
Description	Succinyl-CoA synthetase (SCS) is a mitochondrial matrix enzyme that acts as a heterodimer, being composed of an invariant alpha subunit and a substrate-specific beta subunit. The protein encoded by this gene is an ATP-specific SCS beta subunit that dimerizes with the SCS alpha subunit to form SCS-A, an essential component of the tricarboxylic acid cycle. SCS-A hydrolyzes ATP to convert succinate to succinyl-CoA. Defects in this gene are a cause of myopathic mitochondrial DNA depletion syndrome. A pseudogene of this gene has been found on chromosome 6.
Form	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10% glycerol.
Molecular Mass	44.5 kDa
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining
Notes	Recombinant protein was captured through anti-DDK affinity column followed by conventional chromatography steps.
Concentration	>50 ug/mL as determined by microplate BCA method

GENE INFORMATION

Gene Name SUCLA2 succinate-CoA ligase ADP-forming beta subunit [Homo sapiens]

Official Symbol SUCLA2

Synonyms A-SCS; A-BETA; MTDPS5; SCS-betaA

Gene ID 8803

mRNA Refseq NM_003850

Protein Refseq NP_003841

MIM 603921

UniProt ID Q9P2R7
