

Recombinant Human Protein Arginine Methyltransferase 1, His-MBP-tagged

Cat. No. PRMT1-1761H **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Species	Human
Source	Human
Product Overview	Recombinant human PRMT1, fused to His-MBP tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques.
Description	Protein arginine N-methyltransferase 1 (PRMT1) is a type I methyltransferase that transfers a methyl group from S-adenosylmethionine to guanidino nitrogens of arginine residues to form monomethylarginine and asymmetric dimethylarginine. Functions of type I arginine methylation in proteins may include regulation of transcription, modulation of the affinity of nucleic acid-binding proteins, regulation of interferon signaling pathways, and targeting of nuclear proteins.
