

## Recombinant Human TMED9 Protein, MYC/DDK-tagged

**Cat. No.** TMED9-298H    **Lot. No.** (See product label)

### SPECIFICATION

|                         |                                                                                                                                                                                                                              |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b> | Recombinant Human TMED9 fused with MYC/DDK tag at C-terminal was expressed in HEK293.                                                                                                                                        |
| <b>Species</b>          | Human                                                                                                                                                                                                                        |
| <b>Source</b>           | HEK293                                                                                                                                                                                                                       |
| <b>Description</b>      | This gene is a member of a family of genes encoding transport proteins located in the endoplasmic reticulum and the Golgi. A similar gene in mouse is the target of microRNA miR-296, which is part of an imprinted cluster. |
| <b>Form</b>             | 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10% glycerol.                                                                                                                                                                        |
| <b>Molecular Mass</b>   | 27.1 kDa                                                                                                                                                                                                                     |
| <b>Purity</b>           | > 80% as determined by SDS-PAGE and Coomassie blue staining                                                                                                                                                                  |
| <b>Concentration</b>    | >50 ug/mL as determined by microplate BCA method                                                                                                                                                                             |

### GENE INFORMATION

|                        |                                                                                  |
