

ApoBrdU DNA Fragmentation Assay Kit

Cat. No. Kit-2240 **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Internucleosomal DNA fragmentation is a hallmark of apoptosis in mammalian cells. Apo-BrdU In Situ DNA Fragmentation Assay Kit provides complete components including positive and negative control cells for conveniently detecting DNA fragmentation by fluorescence microscopy or flow cytometry. The kit utilizes Br-dUTP (bromolated deoxyuridine triphosphate nucleotides) which is more readily incorporated into DNA strand breaks than other larger ligands (e.g., fluorescein, biotin or digoxigenin). The greater incorporation gives rise to brighter signal when the Br-dUTP sites are identified by a fluorescein labeled anti-BrdU monoclonal antibody.
Applications	The TUNEL-based assay kit provides complete components including positive and negative control cells for convenient detection of DNA fragmentation in cultured cells and tissue sections.
Storage	-20°C
Shipping	Gel Pack
Size	60 assays
Kit Components	Positive Control Cells; Negative Control Cells; Wash Buffer; Reaction Buffer; TdT Enzymes; Br-dUTP; Rinse Buffer; Anti-BrdU-FITC Antibody; PI/RNase Staining Buffer
Target Species	Mammalian
Detection method	Flow cytometry (Ex/Em = 488/520 nm for FITC, and 488/623 nm for PI) and

fluorescence microscopy (FITC and rhodamine filters)

Features & Benefits

Simple procedure; takes ~ 3 hours;
Fast and convenient;
The assay is sensitive and stable;
The TUNEL-based assay kit provides complete components including positive and negative control cells for convenient detection of DNA fragmentation in cultured cells and tissue sections.
