

Recombinant Human CBFA2T3 Protein, GST-Tagged

Cat. No. CBFA2T3-0453H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human CBFA2T3 full-length ORF (AAH62624.1, 1 a.a. - 615 a.a.) recombinant protein with GST-tag at N-terminal.
Species	Human
Source	Wheat Germ
Description	This gene encodes a member of the myeloid translocation gene family which interact with DNA-bound transcription factors and recruit a range of corepressors to facilitate transcriptional repression. The t(16;21)(q24;q22) translocation is one of the less common karyotypic abnormalities in acute myeloid leukemia. The translocation produces a chimeric gene made up of the 5'-region of the runt-related transcription factor 1 gene fused to the 3'-region of this gene. This gene is also a putative breast tumor suppressor. Alternative splicing results in transcript variants. [provided by RefSeq, Nov 2010]
