SPECIFICATION

Product Overview	Human CDK4 (NM_001786, 4 a.a. - 303 a.a.) and CCND1 (NM_053056, 4 a.a. - 295 a.a.) recombinant protein with GST GST tag expressed in Sf9 cells.
Species	Human
Source	Insect Cells
ProteinLength	4-303;4-295 a.a.
Description	The protein encoded by this gene is a member of the Ser/Thr protein kinase family. This protein is highly similar to the gene products of <i>S. cerevisiae</i> cdc28 and <i>S. pombe</i> cdc2. It is a catalytic subunit of the protein kinase complex that is important for cell cycle G1 phase progression. The activity of this kinase is restricted to the G1-S phase, which is controlled by the regulatory subunits D-type cyclins and CDK inhibitor p16(INK4a). This kinase was shown to be responsible for the phosphorylation of retinoblastoma gene product (Rb). Mutations in this gene as well as in its related proteins including D-type cyclins, p16(INK4a) and Rb were all found to be associated with tumorigenesis of a variety of cancers. Multiple polyadenylation sites of this gene have been reported. [provided by RefSeq, Jul 2008]
