

Recombinant Human Serine/Threonine/Tyrosine Interacting Protein, His-tagged

Cat. No. STYX-1935H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human STYXprotein, fused to His-tag at N-terminus, was expressed in E.coli and purifiedby using conventional chromatography.
Species	Human
Source	E.coli
Description	STYX, also known as serine/threonine/tyrosine-interactingprotein, belongs to the prot ein-tyrosine phosphatase family. It contains aGly residue instead of a conserved Cys residue in the dsPTPase catalytic loopwhich renders it catalytically inactive as a phos phatase. The binding pocketis however sufficiently preserved to bind phosphorylated substrates, andmaybe protect them from phosphatases. It seems to play a role in sper miogenesis.
Form	Liquid. 20mMTris-HCl buffer (pH8.0) containing 30% glycerol 1mM DTT,0.1M NaCl.
Molecular Weight	28.0 kDa(247aa) confirmedby MALDI-TOF.
Purity	> 85% by SDS - PAGE.
Concentration	0.25 mg/ml(determined by Bradford assay).
