

Recombinant Human EGFR Protein

Cat. No. EGFR-P1001H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant soluble Human EGFR (621 amino acid) glycoprotein without tag was expressed in CHO cells.
Species	Human
Source	CHO
Conjugation/Label	Unconjugated
Description	EGFR, epidermal growth factor receptor, is a receptor tyrosine kinases that signals in response to various growth factors. Overexpression has been linked to numerous types of cancer and EGFR is the target of both biological and small molecular therapeutics. EGFR is encoded by the EGFR gene located on chromosome 7 in humans. EGFR belongs to the HER/ERbB family of proteins that includes three other receptor tyrosine kinases, ERbB2, ERbB3, ERbB4. EGFR is a transmembrane receptor and binding of its cognate ligands such as EGF (Epidermal Growth Factor) and TGF alpha (Transforming Growth Factor alpha) to the extracellular domain leads to EGFR dimerization followed by autophosphorylation of the tyrosine residues in the cytoplasmic domain. Overexpression is observed in tumors of the head and neck, brain, bladder, stomach, breast, lung, endometrium, cervix, vulva, ovary, esophagus, stomach and in squamous cell carcinoma.
Form	Lyophilized
Molecular Mass	68.6 kDa
