

Recombinant Human HSFY1 Protein, GST-tagged

Cat. No. HSFY1-5092H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human HSFY1 full-length ORF (NP_149099.2, 1 a.a. - 401 a.a.) recombinant protein with GST-tag at N-terminal.
Species	Human
Source	Wheat Germ
Description	This gene encodes a member of the heat shock factor (HSF) family of transcriptional activators for heat shock proteins. This gene is a candidate gene for azoospermia, since it localizes to a region of chromosome Y that is sometimes deleted in infertile males. The genome has two identical copies of this gene within a palindromic region; this record represents the more centromeric copy. Alternative splicing results in multiple transcript variants encoding distinct isoforms. [provided by RefSeq
