

Active Recombinant Human DYRK4 Protein, Flag-tagged

Cat. No. DYRK4-2992H Lot. No. (See product label)

SPECIFICATION

Product Overview	Human DYRK4 (NP_003836.1, 1 a.a. - 520 a.a.) full-length recombinant protein with Flag tag expressed in baculovirus infected Sf21 cells.
Species	Human
Source	Insect Cells
Description	This gene encodes an enzyme that belongs to a conserved family of serine/threonine protein kinases. Members of this dual specificity kinase family are thought to function in the regulation of cell differentiation and proliferation, survival, and in development. Alternate splicing results in multiple transcript variants. Additional alternatively spliced transcript variants of this gene have been described, but their full-length nature is not known. [provided by RefSeq, Aug 2013]
Bio-activity	The activity was measured by off-chip mobility shift assay. The enzyme was incubated with fluorescence-labeled substrate and Mg(or Mn)/ATP. The phosphorylated and unphosphorylated substrates were separated and detected by LabChip 3000. Substrate: DYRKtide. ATP: 100 μM.
Molecular Mass	61 kDa
Purity	60 % by SDS-PAGE/CBB staining
