

Recombinant Human EHMT1 Protein, GST-tagged

Cat. No. EHMT1-3136H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human EHMT1 full-length ORF (AAH47504.1, 1 a.a. - 808 a.a.) recombinant protein with GST-tag at N-terminal.
Species	Human
Source	Wheat Germ
Description	The protein encoded by this gene is a histone methyltransferase that methylates the lysine-9 position of histone H3. This action marks the genomic region packaged with these methylated histones for transcriptional repression. This protein may be involved in the silencing of MYC- and E2F-responsive genes and therefore could play a role in the G0/G1 cell cycle transition. Defects in this gene are a cause of chromosome 9q subtelomeric deletion syndrome (9q-syndrome, also known as Kleefstra syndrome). Alternative splicing results in multiple transcript variants.
