

Active Recombinant Human EIF2AK4 Protein, GST-tagged

Cat. No. EIF2AK4-3152H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human EIF2AK4 (NP_Q9P2K8.2, 1 a.a. - 1649 a.a.) full-length recombinant protein with GST tag expressed in baculovirus infected Sf21 cells.
Species	Human
Source	Insect Cells
Description	This gene encodes a member of a family of kinases that phosphorylate the alpha subunit of eukaryotic translation initiation factor-2 (EIF2), resulting in the downregulation of protein synthesis. The encoded protein responds to amino acid deprivation by binding uncharged transfer RNAs. It may also be activated by glucose deprivation and viral infection. Mutations in this gene have been found in individuals suffering from autosomal recessive pulmonary venoocclusive-disease-2. [provided by RefSeq, Mar 2014]
Form	Liquid
Bio-activity	The activity was determined by ELISA. The enzyme was incubated with GST-fused substrate protein and tRNA, and after stopping kinase reaction by EDTA, the reaction solution was transferred into glutathione-coated plate. Phosphorylation was detected by anti-phospho antibody and HRP-labeled anti-rabbit IgG. Substrate: EIF2S1. ATP: 100 µM.
Molecular Mass	215 kDa
