

Recombinant Human FASLG Protein

Cat. No. FASLG-3855H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human FASLG full-length ORF (AAH17502.1) recombinant protein without tag.
Species	Human
Source	Wheat Germ
Description	This gene is a member of the tumor necrosis factor superfamily. The primary function of the encoded transmembrane protein is the induction of apoptosis triggered by binding to FAS. The FAS/FASLG signaling pathway is essential for immune system regulation, including activation-induced cell death (AICD) of T cells and cytotoxic T lymphocyte induced cell death. It has also been implicated in the progression of several cancers. Defects in this gene may be related to some cases of systemic lupus erythematosus (SLE). Alternatively spliced transcript variants have been described. [provided by RefSeq, Nov 2014]
