

## Recombinant Human CCNB1IP1 Protein, His-tagged

**Cat. No.** CCNB1IP1-2995H **Lot. No.** (See product label)

### SPECIFICATION

|                         |                                                                                                                                                                                             |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b> | Recombinant Human CCNB1IP1 protein, fused to His-tagged at N-terminus, was expressed in E. coli.                                                                                            |
| <b>Species</b>          | Human                                                                                                                                                                                       |
| <b>Source</b>           | E.coli                                                                                                                                                                                      |
| <b>Description</b>      | E3 ubiquitin-protein ligase. Modulates cyclin B levels and participates in the regulation of cell cycle progression through the G2 phase. Overexpression causes delayed entry into mitosis. |
| <b>Form</b>             | 25 mM Tris, pH 8.0, 150 mM NaCl, 10% glycerol, 1% Sarkosyl.                                                                                                                                 |
| <b>Molecular Mass</b>   | 31.4 kDa                                                                                                                                                                                    |
| <b>Purity</b>           | > 80% as determined by SDS-PAGE and Coomassie blue staining                                                                                                                                 |
| <b>Concentration</b>    | >50 ug/mL as determined by microplate BCA method                                                                                                                                            |

### GENE INFORMATION

|                        |                                                                                        |
|------------------------|----------------------------------------------------------------------------------------|
| <b>Gene Name</b>       | CCNB1IP1 cyclin B1 interacting protein 1, E3 ubiquitin protein ligase [ Homo sapiens ] |
| <b>Official Symbol</b> | CCNB1IP1                                                                               |
