

Recombinant Human Glutathione S-Transferase Omega 2, His-tagged

Cat. No. GSTO2-1961H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant humanGSTO2 protein, fused to His-tag at N-terminus, was expressed in E. coli andpurified by using conventional chromatography techniques.
Species	Human
Source	E.coli
Description	GlutathioneS-transferase omega 2, also known as GSTO2, belongs to the GST superfamilyand may be involved in catalyzing the reaction of glutathione with a widevariety of organic compounds to form thioethers, a process that is essentialfor the metabolism and detoxification of a variety of xenobiotics andcarcinogens. GSTO2 is related to GSTO1 and is expressed in a variety oftissues throughout the body where it functions to catalyze the conversion ofRX and glutathione to HX and R-S-glutathione.
Form	Liquid. In 20mMTris-HCl buffer (pH 8.0) containing 0.1M NaCl, 40% glycerol.
Molecular Weight	30.6 kDa(266aa), confirmed by MALDI-TOF.
Purity	> 85%by SDS-PAGE
Concentration	0.25mg/ml (determined by Bradford assay)
Sequences of	MGSSHHHHHHSSGLVPRGSH MGSMMSGDATR TLGKGSQPPG PVPEGLIRIY

Location	
Pathway	Biological oxidations; Drugmetabolism-cytochrome P450; Glutathione conjugation; Metabolism; Metabolismof vitamins and cofactors; Metabolism of water-soluble vitamins andcofactors; Metabolism of xenobiotics by cytochrome P450; Phase IIconjugation; Vitamin C (ascorbate) metabolism
Function	glutathione dehydrogenase (ascorbate)activity; glutathione transferase activity; oxidoreductase activity;transferase activity
