

Recombinant Human CEACAM5 Protein, DDK-tagged

Cat. No. CEACAM5-3190H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CEACAM5 protein, fused to DDK-tagged at C-terminus, was expressed in Insect cells.
Species	Human
Source	Insect Cells
Description	This gene encodes a cell surface glycoprotein that represents the founding member of the carcinoembryonic antigen (CEA) family of proteins. The encoded protein is used as a clinical biomarker for gastrointestinal cancers and may promote tumor development through its role as a cell adhesion molecule. Additionally, the encoded protein may regulate differentiation, apoptosis, and cell polarity. This gene is present in a CEA family gene cluster on chromosome 19. Alternative splicing results in multiple transcript variants.
Form	50 mM Tris-HCl pH 8.0, 150 mM NaCl, 10%glycerol. Store at -80 Centigrade. Avoid repeated freeze-thaw cycles. Stable for at least 3 months from receipt of products under proper storage and handling conditions.
Molecular Mass	71 kDa
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining
Concentration	>50 ug/mL as determined by microplate BCA method
