

## Recombinant Human APBB1IP Protein, MYC/DDK-tagged

Cat. No. APBB1IP-2315H    Lot. No. (See product label)

### SPECIFICATION

|                  |                                                                                                   |
|------------------|---------------------------------------------------------------------------------------------------|
| Product Overview | Recombinant human APBB1IP protein, fused to MYC/DDK-tagged at C-terminus, was expressed in HEK293 |
| Species          | Human                                                                                             |
| Source           | HEK293                                                                                            |
| Form             | 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10% glycerol.                                             |
| Molecular Mass   | 73 kDa                                                                                            |
| Purity           | > 80% as determined by SDS-PAGE and Coomassie blue staining                                       |
| Concentration    | >50 ug/mL as determined by microplate BCA method                                                  |

### GENE INFORMATION

|                 |                                                                                                              |
|-----------------|--------------------------------------------------------------------------------------------------------------|
| Gene Name       | APBB1IP amyloid beta (A4) precursor protein-binding, family B, member 1 interacting protein [ Homo sapiens ] |
| Official Symbol | APBB1IP                                                                                                      |
| Synonyms        | INAG1; PREL1; RARP1; RIAM                                                                                    |
| Gene ID         | 54518                                                                                                        |
