

Active Recombinant Mouse IL27 Protein

Cat. No. IL27-5204M **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Mouse IL27 (Q8K3I6) recombinant protein expressed in Escherichia coli.
Species	Mouse
Source	E.coli
Description	Interleukin 27 (IL-27) is a member of the IL-12 cytokine family. It is a heterodimeric cytokine that is composed of two distinct genes, Epstein-Barr virus-induced gene 3 (EBI3) and IL-27p28. IL-27 is expressed by antigen presenting cells and interacts with a specific cell-surface receptor complex known as IL-27 receptor (IL-27R). This receptor consists of two proteins, IL-27 α and gp130. IL-27 induces differentiation of the diverse populations of T cells in the immune system and also upregulates IL-10.
Form	Lyophilized
Bio-activity	The activity is determined by the dose-dependent inhibition of IL-17A expression from mouse CD4 ⁺ splenocytes stimulated with TGF-beta and IL-6. 50 ng/mL of mouse p28 inhibits greater than 25% of IL-17A expression.
