

Recombinant Human IL7R Protein

Cat. No. IL7R-5169H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human IL7R full-length ORF (AAH67539.1) recombinant protein without tag.
Species	Human
Source	Wheat Germ
Description	<p>The protein encoded by this gene is a receptor for interleukine 7 (IL7). The function of this receptor requires the interleukin 2 receptor, gamma chain (IL2RG), which is a common gamma chain shared by the receptors of various cytokines, including interleukine 2, 4, 7, 9, and 15. This protein has been shown to play a critical role in the V(D)J recombination during lymphocyte development. This protein is also found to control the accessibility of the TCR gamma locus by STAT5 and histone acetylation. Knockout studies in mice suggested that blocking apoptosis is an essential function of this protein during differentiation and activation of T lymphocytes. The functional defects in this protein may be associated with the pathogenesis of the severe combined immunodeficiency (SCID). [provided by RefSeq]</p>
