

Recombinant Human MFSD8 Protein

Cat. No. MFSD8-4372H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Human MFSD8 full-length ORF (ADZ15480.1) recombinant protein without tag.
Species	Human
Source	Wheat Germ
Description	This gene encodes a ubiquitous integral membrane protein that contains a transporter domain and a major facilitator superfamily (MFS) domain. Other members of the major facilitator superfamily transport small solutes through chemiosmotic ion gradients. The substrate transported by this protein is unknown. The protein likely localizes to lysosomal membranes. Mutations in this gene are correlated with a variant form of late infantile-onset neuronal ceroid lipofuscinoses (vLINCL). [provided by RefSeq]
