

## Recombinant Human RABEPK Protein, MYC/DDK-tagged

Cat. No. RABEPK-301H    Lot. No. (See product label)

### SPECIFICATION

|                  |                                                                                                |
|------------------|------------------------------------------------------------------------------------------------|
| Product Overview | Recombinant human RABEPK protein, fused to MYC/DDK tag at C-terminus, was expressed in HEK293. |
| Species          | Human                                                                                          |
| Source           | HEK293                                                                                         |
| Form             | 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.                                         |
| Molecular Mass   | 40.4 kDa                                                                                       |
| Purity           | > 80% as determined by SDS-PAGE and Coomassie blue staining                                    |
| Concentration    | >50 ug/mL as determined by microplate BCA method                                               |

### GENE INFORMATION

|                 |                                                          |
|-----------------|----------------------------------------------------------|
| Gene Name       | Rab9 effector protein with kelch motifs [ Homo sapiens ] |
| Official Symbol | RABEPK                                                   |
| Synonyms        | bA65N13.1; p40; RAB9P40                                  |
| Gene ID         | 10244                                                    |
