

## Recombinant Human VSIG2 Protein, MYC/DDK-tagged

**Cat. No.** VSIG2-488H    **Lot. No.** (See product label)

### SPECIFICATION

|                         |                                                                                               |
|-------------------------|-----------------------------------------------------------------------------------------------|
| <b>Product Overview</b> | Recombinant human VSIG2 protein, fused to MYC/DDK tag at C-terminus, was expressed in HEK293. |
| <b>Species</b>          | Human                                                                                         |
| <b>Source</b>           | HEK293                                                                                        |
| <b>Form</b>             | 25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.                                        |
| <b>Molecular Mass</b>   | 34.2 kDa                                                                                      |
| <b>Purity</b>           | > 80% as determined by SDS-PAGE and Coomassie blue staining                                   |
| <b>Concentration</b>    | >50 ug/mL as determined by microplate BCA method                                              |

### GENE INFORMATION

|                        |                                                              |
|------------------------|--------------------------------------------------------------|
| <b>Gene Name</b>       | V-set and immunoglobulin domain containing 2[ Homo sapiens ] |
| <b>Official Symbol</b> | VSIG2                                                        |
| <b>Synonyms</b>        | 2210413P10Rik; CTH; CTXL                                     |
| <b>Gene ID</b>         | 23584                                                        |
