Recombinant Human ZNF426 Protein, His-tagged

Cat. No. ZNF426-581H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human ZNF426 protein, fused to His tag at N-terminus, was expressed in E. coli.
Species	Human
Source	E.coli
Description	Kaposi's sarcoma-associated herpesvirus (KSHV) can be reactivated from latency by the viral protein RTA. The protein encoded by this gene is a zinc finger transcriptional repressor that interacts with RTA to modulate RTA-mediated reactivation of KSHV. While the encoded protein can repress KSHV reactivation, RTA can induce degradation of this protein through the ubiquitin-proteasome pathway to overcome the repression. Several transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec 2015].
Form	25 mM Tris, pH 8.0, 150 mM NaCl, 10 % glycerol, 1 % Sarkosyl.
Molecular Mass	62.9 kDa
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining
Concentration	>50 ug/mL as determined by microplate BCA method

Gene Name	zinc finger protein 426[Homo sapiens]
Official Symbol	ZNF426
Synonyms	K-RBP; K-RBP
Gene ID	79088
mRNA Refseq	NM_024106.1
Protein Refseq	NP_077011.1
UniProt ID	Q9BUY5

Tel: 1-631-559-9269 1-516-512-3133
Email: info@creative-biomart.com Fax: 1-631-938-8127
