

Recombinant Human USP27X Protein, MYC/DDK-tagged

Cat. No. USP27X-678H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human USP27X protein, fused to MYC/DDK tag at C-terminus, was expressed in HEK293.
Species	Human
Source	HEK293
Description	This gene encodes a member of the peptidase protein family. The encoded protein functions as a deubiquitinase that is involved in upregulation of the pro-apoptotic Bim protein. This protein may act as a tumor suppressor by increasing levels of Bim to counteract anti-apoptotic signals in cancer cells. Mutations in this gene have been associated with X-linked mental retardation. [provided by RefSeq, Dec 2016]
