

Recombinant Human KLK6 Protein, MYC/DDK-tagged

Cat. No. KLK6-690H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human KLK6 protein, fused to MYC/DDK tag at C-terminus, was expressed in HEK293.
Species	Human
Source	HEK293
Description	This gene encodes a member of the kallikrein subfamily of the peptidase S1 family of serine proteases. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. The encoded preproprotein is proteolytically processed to generate the mature protease. Expression of this protease is regulated by steroid hormones and may be elevated in multiple human cancers and in serum from psoriasis patients. The encoded protease may participate in the cleavage of amyloid precursor protein and alpha-synuclein, thus implicating this protease in Alzheimer's and Parkinson's disease, respectively. This gene is located in a gene cluster on chromosome 19. Alternative splicing results in multiple transcript variants, at least one of which encodes an isoform that is proteolytically processed. [provided by RefSeq, Feb 2016]
Form	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10 % glycerol.
Molecular Mass	14.9 kDa
Purity	> 80% as determined by SDS-PAGE and Coomassie blue staining

 45-1 Ramsey Road, Shirley, NY 11967, USA

Concentration >50 ug/mL as determined by microplate BCA method

GENE INFORMATION

Gene Name kallikrein related peptidase 6[Homo sapiens]

Official Symbol KLK6

Synonyms Bssp; hK6; Klk7; PRSS18; PRSS9; SP59

Gene ID 5653

mRNA Refseq NM_001012964.1

Protein Refseq NP_001012982.1

MIM 602652

UniProt ID Q92876

 Tel: 1-631-559-9269 1-516-512-3133
