

Recombinant Human TIGD1 Protein, His-tagged

Cat. No. TIGD1-1035H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant human TIGD1 protein, fused to His tag at N-terminus, was expressed in E. coli.
Species	Human
Source	E.coli
Description	The protein encoded by this gene belongs to the tigger subfamily of the pogo superfamily of DNA-mediated transposons in humans. These proteins are related to DNA transposons found in fungi and nematodes, and more distantly to the Tc1 and mariner transposases. They are also very similar to the major mammalian centromere protein B. The exact function of this gene is not known. [provided by RefSeq, Jul 2008].
