SPECIFICATION

Product Overview	
Species	Human
Source	E.coli
Description	The human Calmodulin 1 full-lengthrecombinant protein was expressed in E. coli.
Introduction	Calmodulin 1 is a member of calcium-modulated proteins, which is present in the cytosol and on membranes facing the cytosol, and has a high affinity for calcium. Calmodulin 1 has 4 calcium-binding domains and plays a role in cell growth, cell cycle, signal transduction, and the synthesis and release of neurotransmitters. Calmodulin can bind to the epidermal growth factor receptor at its cytosolic juxtamembrane region and this inhibits its tyrosine kinase activity. A number of other proteins including HSP70 have been shown to interact with Calmodulin 1 in a cell-phase-specific manner.
