

Recombinant Human ALDH2

Cat. No. ALDH2-27037TH **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant full length mature Human ALDH2; amino acids 18-517 , 54.5kDa.
Species	Human
Source	E.coli
ProteinLength	18-517 a.a.
Description	This protein belongs to the aldehyde dehydrogenase family of proteins. Two major liver isoforms of aldehyde dehydrogenase, cytosolic and mitochondrial, can be distinguished by their electrophoretic mobilities, kinetic properties, and subcellular localizations. A remarkably high frequency of acute alcohol intoxication among Orientals than among Caucasians could be related to the absence of a catalytically active form of the mitochondrial isozyme. The increased exposure to acetaldehyde in individuals with the catalytically inactive form may also confer greater susceptibility to many types of cancer. This gene encodes a mitochondrial isoform, which has a low K_m for acetaldehydes, and is localized in mitochondrial matrix. Alternative splicing results in multiple transcript variants encoding distinct isoforms.
Biologicalactivity	Specific activity is < 0.2 units/ml, and was obtained by measuring the increase of NADP in absorbance at 340 nm resulting from the reduction of NAD. One unit will oxidize 1.0 umole of acetaldehyde to acetic acid per minute at pH 8.0 at 25C in the presence of beta-NAD, potassium and thiols.
Formulation	Liquid.
