

Active Recombinant Human LGALS3 Protein, His tagged

Cat. No. LGALS3-6914H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Galectin-3 protein (1-250 aa) with His tag was expressed in E. coli and purified by using conventional chromatography techniques.
Species	Human
Source	E. coli
ProteinLength	1-250 aa
Description	This gene encodes a member of the galectin family of carbohydrate binding proteins. Members of this protein family have an affinity for beta-galactosides. The encoded protein is characterized by an N-terminal proline-rich tandem repeat domain and a single C-terminal carbohydrate recognition domain. This protein can self-associate through the N-terminal domain allowing it to bind to multivalent saccharide ligands. This protein localizes to the extracellular matrix, the cytoplasm and the nucleus. This protein plays a role in numerous cellular functions including apoptosis, innate immunity, cell adhesion and T-cell regulation. The protein exhibits antimicrobial activity against bacteria and fungi. Alternate splicing results in multiple transcript variants.
Form	Liquid
Bio-activity	The ED50 for this effect is less or equal to 15 µg/mL. Measured by its ability to agglutinate human red blood cells.
