

Recombinant Human Grancalcin, EF-hand Calcium Binding Protein, His-tagged

Cat. No. GCA-6903H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human GCA protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography. MW: 26.1 kDa.
Species	Human
Source	E.coli
ProteinLength	1-217aa
Description	GCA, also known as Grancalcin, is calcium-binding protein that is especially abundant in human neutrophils. It belongs to the penta EF-hand (PEF) subfamily of EF-hand proteins, which also comprises calpain, sorcin, peflin, and ALG-2. This protein undergoes important conformational changes upon binding of calcium, which subsequently exposes hydrophobic amino acid residues, which direct the protein to hydrophobic surfaces. It interacts with L-plastin, a protein known to have actin bundling activity, which suggests that GCA may play a role in the regulation of neutrophils adhesion.
Form	Liquid. 20mM Tris-HCl buffer (pH8.0) containing 20% glycerol 0.1M NaCl.
Molecular Mass	26.1 kDa (237aa), confirmed by MALDI-TOF
