Recombinant Human Regulator Of Calcineurin 2, His-tagged

Cat. No. RCAN2-6859H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human RCAN2 protein, fused to His-tag at N-terminus, was expressed in E. coli and purified by using conventional chromatography techniques. MW: 24.1 kDa.
Species	Human
Source	E.coli
ProteinLength	1-197aa
Description	RCAN2 belonging to the RCAN (Regulator of calcineurin) family modulate the activity of Calcineurin through a valine-rich region within their carboxyl tail. RCANs compete with NFAT(nuclear factor of activated T-cells) for binding to the same docking site in calcineurin, which results in either inhibition or activation of calcineurin activity. RCAN2 is a Ca(2+) dependent protein phosphatase that is involed in several neuornal functions.
Form	Liquid. In 20mM Tris-HCl buffer (pH 8.0) containing 1mM DTT, 20% glycerol, 0.2M NaCl.
Molecular Mass	24.1 kDa (217aa), confirmed by MALDI-TOF.
