

Recombinant Human EPHX1 Protein, His-tagged

Cat. No. EPHX1-22H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human EPHX1 protein with His tag, was expressed in insect cell.
Species	Human
Source	Insect Cells
Description	EPHX1, also known as epoxide hydrolase 1, is an important bioconversion enzyme that converts epoxides from degradation of aromatics into trans-dihydrodiols that can be conjugated and excreted in the body. The epoxide hydrolase acts both in the activation and decryption of the epoxide. This enzyme plays a role in regulating the extensive oxidation state of heterologous and lipid-derived substrates. Mutations in this gene cause preeclampsia, lack of epoxidase, or increased epoxide hydrolase activity. Recombinant human EPHX1, fused to His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques.
