

Recombinant Human NFASC Protein, GST-tagged

Cat. No. NFASC-596H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human NFASC(661 a.a. - 758 a.a.) fused with GST tag at the N-terminus was produced in Wheat Germ.
Species	Human
Source	Wheat Germ
ProteinLength	661 a.a. - 758 a.a.
Description	This gene encodes an L1 family immunoglobulin cell adhesion molecule with multiple IGcam and fibronectin domains. The protein functions in neurite outgrowth, neurite fasciculation, and organization of the axon initial segment (AIS) and nodes of Ranvier on axons during early development. Both the AIS and nodes of Ranvier contain high densities of voltage-gated Na ⁺ (Nav) channels which are clustered by interactions with cytoskeletal and scaffolding proteins including this protein, gliomedin, ankyrin 3 (ankyrin-G), and betaIV spectrin. This protein links the AIS extracellular matrix to the intracellular cytoskeleton. This gene undergoes extensive alternative splicing, and the full-length nature of some variants has not been determined.
