Cat. No. KDR-1421H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human KDR (789-end) was expressed by baculovirus in Sf9 insect cells using an N-terminal GST tag.
Species	Human
Source	Sf9 Cells
ProteinLength	789 aa-end
Description	KDR (or kinase insert domain receptor) is a growth factor receptor tyrosine kinase that was originally isolated from human endothelial cells where it plays a pivotal role in endothelial cell proliferation and differentiation. KDR and its mouse homologFlk1 bind VEGF with high affinity and are implicated in the development of new blood vessels (angiogenesis). The expression levels of VEGF and KDR are highly correlated during the normal development of the ocular vasculature in humans. Induction of angiogenesis is a critical step in tumor progression, and inhibitors of KDR have been demonstrated both to induce tumor regression and reduce metastatic potential in preclinical models.
