

HDL and LDL/VLDL Assay Kit

Cat. No. Kit-2509 **Lot. No.** (See product label)

SPECIFICATION

Product Overview

Cholesterol concentrations in High-Density Lipoprotein (HDL) and Low-Density (LDL)/Very-Low-Density (VLDL) Lipoproteins are strong predictors for coronary heart disease. Functional HDL offers protection by removing cholesterol from cells and atheroma. Higher concentrations of LDL and lower concentrations of functional HDL are strongly associated with cardiovascular disease due to higher risk of atherosclerosis. The balances between high- and low-density lipoproteins are solely genetically determined, but can be changed by medications, food choices and other factors. Simple, direct and automation-ready procedures for measuring HDL and LDL/VLDL concentrations are very desirable. HDL and LDL/VLDL quantification kit is based on our improved PEG precipitation method in which HDL and LDL/VLDL are separated, and cholesterol concentrations are determined using cholesterol esterase/cholesterol dehydrogenase reagent. In this reaction, NAD is reduced to NADH. The optical density of the formed NADH at 340 nm is directly proportionate to the cholesterol concentration in the sample.

Storage	-20°C
----------------	-------

Shipping	On Ice
-----------------	--------

Size	100 tests
-------------	-----------

Detection method	OD340nm
-------------------------	---------

Compatible Sample Types	Serum
--------------------------------	-------

 45-1 Ramsey Road, Shirley, NY 11967, USA

Features & Benefits	Sensitive and accurate. Requires only 20 μ L serum sample. Detection limit of 5 mg/dL, linearity up to 300 mg/dL cholesterol in 96-well plate assay. Convenient. Room temperature assay. No 37°C heater is needed.
Assay time	60 min
Sensitivity	5 mg/dL
