

Recombinant Full Length Human UBE2D2 Protein

Cat. No. UBE2D2-67H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant human UBE2D2 protein (1-147aa) without tag was expressed in E.coli.
Species	Human
Source	E.coli
ProteinLength	1-147 a.a.
Description	Regulated degradation of misfolded, damaged or short-lived proteins in eukaryotes occurs via the ubiquitin (Ub)-proteasome system (UPS). An integral part of the UPS system is the ubiquitination of target proteins and covalent linkage of Ub-containing proteins to form polymeric chains, marking them as targets for 26S proteasome-mediated degradation. Ubiquitination of proteins is mediated by a cascade of enzymes which includes E1 (ubiquitin activating), E2 (ubiquitin conjugating), and E3 (ubiquitin ligases) enzymes. This gene encodes a member of the E2 enzyme family. Substrates of this enzyme include the tumor suppressor protein p53 and peroxisomal biogenesis factor 5 (PEX5). Alternative splicing results in multiple transcript variants of this gene.
