

Recombinant Human RELT Protein, hlgG-His-tagged

Cat. No. RELT-657H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human RELT Protein is produced by Baculovirus expression system. This protein is fused with a hlgG-His tag.
Species	Human
Source	Insect Cells
ProteinLength	26-162 aa
Description	RELT, also known tumor necrosis factor receptor superfamily member 19L, is one of the the tumor necrosis factor receptor superfamily. It is expressed in hematopoietic tissues and peripheral blood leukocytes. This protein mediates activation of NF-kappa-B and plays a role in T-cell activation. With overexpression of this protein in HEK-293 cells, it induces p38 and JNK signaling and activates apoptosis. And it can also costimulate T-cell proliferation in the presence of CD3 signaling. Recombinant human RELT protein, fused to hlgG-His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques.
