

Recombinant Human UBK6R Protein

Cat. No. UBK6R-404H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human UBK6R Protein is produced by Bacteria expression system.
Species	Human
Source	E.coli
Description	Ubiquitin (Ub) is a 76 amino acid protein widely expressed in the cytoplasmic and nucleus of cells. Ub is posttranslationally conjugated to proteins by the E1, E2, E3 protein ubiquitination cascade. Ub can be conjugated on proteins as monoUb or polyUb chains. Protein ubiquitination plays both proteolytic and nonproteolytic functions. Usually, polyubiquitinated proteins are targeted to the 26S proteasome for proteolysis. Typical concentration to support in vitro ubiquitination is 50-100 μ M. In Ub(K6R), lysine 6 was substituted with an arginine, thereby it cannot form lysine 6-linked polyubiquitin chains.
Form	20 mM Tris, 150 mM NaCl, 2 mM β ME, 10% Glycerol
Molecular Mass	8.5 kDa
Purity	> 95 % by SDS-PAGE
Storage	Store at -80 centigrade; avoid multiple freeze-thaw cycles.
