

Recombinant Human CHRNA4 Protein, Flag-tagged

Cat. No. CHRNA4-88H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human CHRNA4 Protein is produced by HEK293 expression system. This protein is fused with a Flag tag at the C-terminal.
Species	Human
Source	HEK293
Description	This gene encodes a nicotinic acetylcholine receptor, which belongs to a superfamily of ligand-gated ion channels that play a role in fast signal transmission at synapses. These pentameric receptors can bind acetylcholine, which causes an extensive change in conformation that leads to the opening of an ion-conducting channel across the plasma membrane. This protein is an integral membrane receptor subunit that can interact with either nAChR beta-2 or nAChR beta-4 to form a functional receptor. Mutations in this gene cause nocturnal frontal lobe epilepsy type 1. Polymorphisms in this gene that provide protection against nicotine addiction have been described. Alternative splicing results in multiple transcript variants.
Form	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10% glycerol.
