

Recombinant Human NFATC3 Protein, MYC/DDK-tagged

Cat. No. NFATC3-236H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human NFATC3 Protein, transcript variant 1, is produced by HEK293T expression system. This protein is fused with a MYC/DDK tag at the C-terminal.
Species	Human
Source	HEK293
Description	The product of this gene is a member of the nuclear factors of activated T cells DNA-binding transcription complex. This complex consists of at least two components: a preexisting cytosolic component that translocates to the nucleus upon T cell receptor (TCR) stimulation and an inducible nuclear component. Other members of this family participate to form this complex also. The product of this gene plays a role in the regulation of gene expression in T cells and immature thymocytes. Several transcript variants encoding distinct isoforms have been identified for this gene.
Form	25 mM Tris.HCl, pH 7.3, 100 mM glycine, 10% glycerol.
Molecular Mass	115.4 kDa
