

Recombinant Human CES1, His-tagged

Cat. No. CES1-900H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Carboxylesterase 1/CES1 produced by mammalian cells expression system. Target protein is expressed with sequence (Gly18-Glu563) of Human CES1 fused with a polyhistidine tag at the C-terminus.
Species	Human
Source	Mammalian Cells
ProteinLength	18-563 a.a.
Description	Carboxylesterase 1 is a member of a large family of carboxylesterases that are responsible for the hydrolysis of ester and amide bonds. These enzymes have broad substrate specificity ranging from small molecule esters such as phenylester to long chain fatty acid esters and thioesters. They are major determinants of the pharmacokinetic behavior of most therapeutic agents containing an ester or amide bond. CES1 shares the serine hydrolase fold observed in other esterases. CES1 hydrolyzes aromatic and aliphatic esters, but has no catalytic activity toward amides or a fatty acyl-CoA ester. CES1 participates in detoxification of drugs such as cocaine and heroin in serum and liver. It may also play a role in detoxification in the lung and/or protection of the central nervous system from ester or amide compounds.
Purity	Greater than 95% as determined by SEC-HPLC. Greater than 95% as determined by reducing SDS-PAGE.
