

Active Recombinant Human IL6RA protein

Cat. No. IL6RA-3324H Lot. No. (See product label)

SPECIFICATION

Product Overview	Recombinant Human IL6RA Protein is produced by CHO cells expression system.
Species	Human
Source	CHO
Description	IL-6 mediates its biological effects through the type I IL-6 receptor system that consists of two chains, IL-6Rα and gp130. While the IL-6Rα chain is the binding component specific to IL-6, the gp130 chain only transmits signals of IL-6 when bound to IL-6Rα. The gp130 can also transmit signals from LIF, OSM, CNTF, IL-11 and CT-1 in conjunction with other receptor subunits. The low-affinity binding site for IL-6 is composed of IL-6Rα alone. IL-6Rα is expressed in a wide range of cells, including T cells, fibroblasts and macrophages. Soluble IL-6Rα, which consists of only the extracellular domain of the IL-6Rα chain, acts as an agonist of IL-6 activity at low concentrations. The CHO cell-derived Recombinant Human sIL-6 Receptor α is a 37.9 kDa glycoprotein corresponding to 339 amino acid residues of the extracellular domain of IL-6Rα. As a result of glycosylation, Recombinant Human sIL-6 Receptor α migrates with an apparent molecular mass of approximately 57-70 kDa by SDS-PAGE gel, under reducing conditions.
Bio-activity	Determined by its ability to intensify the IL-6 induced growth inhibition of mouse M1 cells. The expected ED50 is ≤ 5.0 ng/ml, in the presence of 20 ng/ml of rhIL-6.
Molecular Mass	37.9 kDa

Purity

≥ 95% by SDS-PAGE gel and HPLC analyses.

Notes

Not for human use.

GENE INFORMATION**Synonyms**

soluble IL-6 receptor alpha; B cell stimulatory factor-2; CD126;
