

Recombinant Human Immunodeficiency Virus Type 2 Subtype A VPX Protein (1-112 aa), His-SUMO-tagged

Cat. No. VPX-1788H **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human Immunodeficiency Virus Type 2 Subtype A (isolate ROD) (HIV-2) VPX Protein (1-112 aa) is produced by E. coli expression system. This protein is fused with a 6xHis-SUMO tag at the N-terminal. Protein Description: Full Length.
Species	Human Immunodeficiency Virus Type 2 Subtype A
Source	E.coli
ProteinLength	1-112 aa
Description	Plays a role in nuclear translocation of the viral pre-integration complex (PIC), thus is required for the virus to infect non-dividing cells. Targets specific host proteins for degradation by the 26S proteasome. Acts by associating with the cellular CUL4A-DDB1 E3 ligase complex through direct interaction with host VPRPB/DCAF-1. This change in the E3 ligase substrate specificity results in the degradation of host SAMHD1. In turn, SAMHD1 depletion allows viral replication in host myeloid cells by preventing SAMHD1-mediated hydrolysis of intracellular dNTPs necessary for reverse transcription (By similarity).
