

Recombinant Human KCNK2 Lysate

Cat. No. KCNK2-96HCL **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Recombinant Human KCNK2 protein transcript variant 1 was overexpressed in human 293 cells (HEK293).
Species	Human
Source	HEK293
Description	This gene encodes one of the members of the two-pore-domain background potassium channel protein family. This type of potassium channel is formed by two homodimers that create a channel that leaks potassium out of the cell to control resting membrane potential. The channel can be opened, however, by certain anesthetics, membrane stretching, intracellular acidosis, and heat. Three transcript variants encoding different isoforms have been found for this gene.
Form	RIPA buffer
Molecular Mass	46.7 kDa
Applications	WB positive control
Storage	The lysate is shipped with dry ice. Upon receiving, store the sample at -20 centigrade. Avoid repeated freeze-thaw cycles. Lysate samples can be diluted with 2xSDS Sample Buffer provided. After dilution, the protein sample should be aliquoted and stored a
