| <b>Description</b>      | Spike protein S1: attaches the virion to the cell membrane by interacting with host receptor, initiating the infection. Spike protein S2': Acts as a viral fusion peptide which is unmasked following S2 cleavage occurring upon virus endocytosis. Spike protein S2: mediates fusion of the virion and cellular membranes by acting as a class I viral fusion protein. Under the current model, the protein has at least three conformational states: pre-fusion native state, pre-hairpin intermediate state, and post-fusion hairpin state. During viral and target cell membrane fusion, the coiled coil regions (heptad repeats) assume a trimer-of-hairpins structure, positioning the fusion peptide in close proximity to the C-terminal region of the ectodomain. The formation of this structure appears to drive apposition and subsequent fusion of viral and target cell membranes. |
| <b>Form</b>             | Each vial contains 100 ug purified protein (1mg/ml) in PBS (pH7.4).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|----------------------|--------------------------------------------------------------|
| <b>Applications</b>  | WB standard, Ab ELISA, immunogen, etc.                       |
| <b>Usage</b>         | For research use only, not for use in diagnostic procedures. |
| <b>Storage</b>       | Store at -80 centigrade, Avoid freeze/thaw cycle.            |
| <b>Concentration</b> | 1 mg/ml                                                      |
