

## Active Recombinant Human HLA-G Protein, Myc/DDK-tagged

Cat. No. HLA-G-001H    Lot. No. (See product label)

### SPECIFICATION

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Product Overview</b> | Recombinant protein of human major histocompatibility complex, class I, G (HLA-G) with a C-Myc/DDK tag was expressed in HEK293T.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Species</b>          | Human                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Description</b>      | HLA-G belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored in the membrane. HLA-G is expressed on fetal derived placental cells. The heavy chain is approximately 45 kDa and its gene contains 8 exons. Exon one encodes the leader peptide, exons 2 and 3 encode the alpha1 and alpha2 domain, which both bind the peptide, exon 4 encodes the alpha3 domain, exon 5 encodes the transmembrane region, and exon 6 encodes the cytoplasmic tail. |
| <b>Bio-activity</b>     | Cell treatment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## GENE INFORMATION

**Gene Name** HLA-G major histocompatibility complex, class I, G [ Homo sapiens (human) ]

**Official Symbol** HLA-G

**Synonyms** HLA-G; major histocompatibility complex, class I, G; MHC-G; HLA class I histocompatibility antigen, alpha chain G; HLA G antigen; HLA-G histocompatibility antigen, class I, G; MHC class I antigen G; MHC class Ib antigen; b2 microglobulin; mutant MHC class I antigen; mutant MHC class Ib antigen

**Gene ID** 3135

**mRNA Refseq** NM\_002127

**Protein Refseq** NP\_002118

**MIM** 142871

**UniProt ID** P17693
