

## Native Mouse Hemoglobin Protein

**Cat. No.** Hb-901M    **Lot. No.** (See product label)

### SPECIFICATION

|                         |                                                                                                                                      |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product Overview</b> | Native Mouse Hemoglobin Protein was purified from Mouse red blood cells.                                                             |
| <b>Species</b>          | Mouse                                                                                                                                |
| <b>Source</b>           | Mouse Red Blood Cell                                                                                                                 |
| <b>Form</b>             | Lyophilized, contains buffer salts.                                                                                                  |
| <b>Purity</b>           | >96%(SDS-PAGE), and two bands corresponding to the alpha and beta subunit are observed.                                              |
| <b>Notes</b>            | Handle as a potentially hazardous substance.                                                                                         |
| <b>Storage</b>          | 2-8 centigrade. Avoid moisture. Aliquot and freeze at -20 centigrade after reconstitution.                                           |
| <b>Reconstitution</b>   | Clear, red-brown solution in 20 mg/ml H <sub>2</sub> O. Reconstitute into provided container and centrifuge to ensure full recovery. |
